PAGINATION

▨ CCI System
■ CCI Software:
- Electronic Pica Pole
- XY
- PageBuilder
- BookIV
- MiniBook
- TechPage

OVERVIEW

CCI has five levels of pagination because of the many diverse makeup applications.

XY: Magazine make-up is accomplished with an automatic depth counter and XY coordinates.

PageBuilder: Our PageBuilder allows loose leaf paging with vertical justification, running heads and feet, automatic numbering, nested formats, and an electronic monitor.

BookIV: BookIV is a book publisher's program written for formal pagination with running heads and feet, widow and orphan control, extensive footnoting ability, graphic positioning, text retrieval for printing in head and foot areas.

TechPage: Since 1977 we have been able to integrate scanned graphics with text for preparation of technical publications and catalogues.

Special Programs: In addition to our turnkey packages, we also offer a data base handler called InfoMix that is capable of paginating copy that comes in from magnetic tape, telecommunications or is resident on the CCI disk.

APPLICATION OVERVIEW

The concept of multilevel pagination allows the system user to make up pages according to their needs.

Special: Specialized applications can be met with such packages as Booklet which was designed for the insurance market to output short booklets in a fixed format imposition.

Typesetting on Display at ICBO

Real Timesaver

202 Typesetter Speeds Output, Eases Pasteup

The Mergenthaler Linotron 202 typesetter cuts down the time normally involved in waiting for material to be typeset. Hooked up to the CCI front-end computer, the 202 accesses typefaces which are stored digitally on magnetic floppy disks and projects the type on a tiny TV screen. This image exposes photographic paper running across the screen. The paper is then developed to create a photographic positive.

Because the type is generated digitally, typesetting

Chart above follows text flow from input to finished typeset pages.

What is a Model Code?

Display of Modern Technology

The typesetting department at the International Conference of Building Officials utilizes the latest and most modern equipment available, geared toward fast, efficient and accurate typesetting of the various publications in the Uniform Building Code family.

No Waste with Word Processor

The CCI typesetting system can communicate directly with the Xerox 850 word processors in operation at ICBO. This interface means that typing a job the first time in the originating department and rekeyboarding for typesetting

The heart of the process is a computerized editing and storage system manufactured by Computer Composition International. Each of three visual display terminals have complete access to all jobs stored by a central computer on twin 12-megabyte magnetic disks. (A megabyte is one million characters.) Operators can simultaneously input new jobs, call out old jobs for revi-

HIGHLIGHTS

XY Coordinates

- Expressed in picas and points
- Works with electronic pica pole
- No limit to number issued in a page

PageBuilder

- Automatic page numbering
- Vertically justifies

BookIV

- All PageBuilder features
- Orphan and widow control
- Text retrievals
- Automatic footnoting
- Automatic graphic handling

TechPage

- Graphic subsystem
- Interface to graphic scanner
- Output line art to state-of-the-art typesetters

FEATURES and BENEFITS

XY coordinates

The operator has the freedom to move copy blocks by position without having to calculate indents, tabs, measures, etc.

Electronic Monitor

By flagging house and author corrections in the gutter of the typeset copy or the line printer copy, electronic monitor enables block corrections to be set automatically.

Widow and orphan control

This system automatically assumes responsibility for the number of lines necessary at the beginning of the paragraph at the bottom of the page, at the end of the paragraph, at the top of the page, how many lines need to break with a head, etc., according to user specifications.

The retrieval of text from chapter for running head/foot

Allows the system to change the running head/foot information as the subject matter of the book changes, always reflecting what is concurrently being discussed.

TechPage

Allows graphics and line art to be used with any of the pagination routines to produce text and illustrations in made up form.

SPECIAL CONSIDERATIONS: Systems that support it: All CCI front-end systems. Memory consideration: None. Environmental: CCI system. Modem type: N/A. Communication protocol: N/A. Other: Modem necessary when hooking up remote Editor Station.
